INTRODUCTION

In a year that sees the round world at war, when the peace of Savile Row must be maintained by a navy at sea and by armies in the field, the Burlington Club has gathered together a few rare things which tell of ancient wars.

For in war was the beginning of all our heraldry.

It belongs now to peace. War-paint is the dingiest hue of the palette. The fighting ships go out of port without any of the old braveries of figure-head and stern-gallery on which carver and painter had done gay work. The scarlet of the king's coat has shrunk to a collar-patch: the banners stand no more with the English battle: the men who fight in the burrowing warfare of trench and sap are clad in the livery of the mud about them. For the last armorial badges we must look closely to those poor devices which the button-maker's cramped art has stamped out according to the sealed patterns of the War Office. Very poor and meanly devised are those little regimental badges. Yet something of the potency of the old charm remains with them: pride goes with the swan that was Bohun's swan: a Staffordshire man will do honour to the knot on his cap and collar, the knot that was Stafford's long before the soldier had his first musket.

Heraldry belongs to peace. Nevertheless it has the memory of war. The crest upon the respectable tea-spoon was a crest for a knight's helm:
the shield of arms on a scholar's bookplate may be the pale remembrance of a shield that was braced to a strong arm. A banner over the neat Victorian battlements of the castle does but give the countryside the news of the "Morning Post" paragraph, that the ducal family has left town for the country; but the banner's bearings are the same that once came into the fight above a hundred lances and a thousand bills and bows.

Antiquaries have a long way to go before they can name to us the arms on the first shield of arms seen in England. And England is a fair field for the search after the antiquities of heraldry. Here or in France the quest must be followed among the relics of the knights whose speech was French on either side of the Channel water. Richard I, our Angevin king, shows the three English leopards on his seal a full quarter of a century before the French king Louis seals with the golden lilies. There is a tale of Henry I hanging to the neck of Richard's grandsire a shield painted with lions, the same shield that Geoffrey bears in the picture on the Le Mans enamel, the same that arms Richard's bastard brother on his Salisbury tomb. We may reckon as English heraldry the lions on that shield, and as English the three red cheverons of Clare, famous bearings which gave England her fancy for that charge of the cheveron which is upon so many of our armorial coats.

Two seals tell us that the three red cheverons were seen in the wars of King Stephen's reign. Therefore we know that we are there near the beginning of such heraldry. It is very certain that no armorial device on shield or coat or banner went into the fight at Hastings: the needlework of Bayeux is a fair witness that the conquerors let the shield-maker paint their long shield with any dragon shapes or stripings of colour that were to his fancy. Shields have been painted since their broad faces first tempted the artist with the paint-pots. The bucklers of Charlemagne and all his paladins may have had many rare devices. But those devices were not the charges of heraldry. Not until a man can say: "There rides one whose golden shield has three red cheverons, and that is Earl Gilbert's
INTRODUCTION

shield and none other's, the shield that his son will bear after him," do we come to what we may truly call heraldry or armory.

So we may say, guessing timidly, that this business of armory can hardly be older than the reign of the first Henry. Before that time we have no armorial seal, nor other antiquity of heraldry, no word in a song or a chronicle of aught on a shield of arms. But, once the seed was set, it grew up soon into a tall tree. "Heraldry," said Peter le Neve, a herald by trade, "a study which only loads the memory without improving the understanding." Surely he spoke of the heraldry which was in the fusty books on his shelf. For the wise antiquary who loves a bit of heraldry will never chide the folly of what gives him a curious pleasure. There is something in all this heraldry that from the beginning has touched us with a charm not easily to be explained: something in the simple souls of men is pleased by those bright reds and blues and gold, those beasts and birds, and bars and bends and crosses, seen bright in the glass of a chapel window or faded on an ancient skin of parchment.

Not a hundred years from the beginning and England was pied with armories, a garden of gay heraldry. Men had the sharp eyes and long memories that belong to men whose minds do not run upon books. All the great barons had their banners of arms: the knights had chosen their shields. And all up and down the land men were apt to learn the devices of the shields and to know Bohun and Mortimer, Clare and Ferrers and Warenne, at sight of their banners. In the battlefield the lord, disguised in helm and mail, was revealed by shield and coat. His own men fought round his banner: his enemies charged down upon it. Peril and safety were in the enchanted coat. The king might share his dangers with a dozen companions, each with the king's shield on his shoulder: but at Bannockburn an earl went down in the press and was hacked to his death by Scots who would have ventured their lives to save him and his ransom if he had worn the coat of his house.

Heraldry coloured all the knight's gear for war. His arms were
multiplied from the shield that was first to take them: they were broidered on his coat and pennon, and on the trapper of his horse: they were painted on his saddle-bow. The crest, rare enough in the thirteenth century, topped splendidly the fourteenth century helms with heads of bearded soldans, with winged necks of swans, with firedrakes and towers and harpies and leaping dolphins, with bushes of peacock feathers and ladies rising out of garlands. The knight's horse might bear the crest over his ears. Our English forefathers saw Castile and Aragon wondering at the new fashion and imitating it: the envious Scot marked the "tymmeris" of the English helms, and would have one of his own.

This was armory of war and tournament. It abode the longer in the tilt-yard, where the bustling heralds were busy with nice lore of shield and crest and nobility of blood. We may take it that the crest was soon found to be top-heavy ornament for a long campaign: the beautiful work of the later armourers made the shield useless in fight and might not be cloaked, in the pageant of war, with mere broidery of lions and leopards. It is possible that the armorial coat was out of fashion before the time of the York and Lancaster wars. The knight may wear it on his tomb, even as the lady who lies beside him has her own arms on her gown, and her lord's on her cloak. But this is the convention of the tomb. Alive, she wore no such gear. By the same convention the knight's descendant, the colonel, will be painted by a Georgian artist with shining armour on back and breast and arms.

As for the armory of peace, it is all but as old as the armory of war. So soon as the baron was fairly known by his shield, his shield became his mark, to be set to everything that was his. Its colours lit the glass of his chapel and flowered the hangings of the hall, the bed-curtains, and the coverlet. The chisels that worked for the new architects with their rich fancies carved shields over chimney and door and under the battling of the tower. Chaplains wore copes whose hoods were broidered with their master's arms: they sang mass in chasubles decked with little shields,
INTRODUCTION

having over their shoulders stoles woven with shield over shield of the
lord's kinsfolk and allies. Goldsmiths and silversmiths, and brassworkers
and jewellers put the shield on the print of the mazer, on the foot and knot
of the candlestick, worked the brooch and collar with it, wrought it into the
chalice and the crozier.

In the middle of all medieval ornament was the shield of arms. The
living man sealed with it, his solemnest sign of attestation. With his arms
on the wax, the deed was his deed. The dead man took care to have his
arms all about his tomb, proclaiming his style to lettered and unlettered.
Everybody would share this delightful toy with the warrior who found it.
Bishops and clerks sealed with seals having those shields of arms which
did not belong to their calling: women might not be denied the pretty
thing, the kindly heralds finding tricks of quartering and parting arms so
that the lady should share her husband's shield and her father's. There are
grave books which still protest that arms are sign and token of nobility.
But old nobility in England cannot be more than freedom of blood; in any
case, the citizen and butcher, the citizen and baker, the citizen and candle-
stick-maker hastened to display their arms on seal and dish and gravestone.
If the fourteenth-century herald troubled himself in the matter, it can but
have been to earn a silver piece by giving an expert's advice in the
choosing of the new shield and the saving of its owner from the offence of
taking arms which already belonged to another. For, once a man had taken
arms and gained the right of user, his arms were his property, to have and
to hold to him and his heir, or even to convey away by deed.

Thus thickly sown in the English field, this peaceful heraldry of hall
and church, of bowl and finger-ring, outlived those middle ages which gave
it the beauty which it might not endure. By the Elizabethan age the books
had it in hand. There was an Englishman who made a book about
heraldry for Richard II's Bohemian wife, and Nicholas Upton had written
de studio militari for the good Duke Humfrey. We know enough, now, of
the practice of medieval heraldry to know these heraldry books for the

rambling fantasies that they are. Yet in the hands of the Elizabethans and their children they seemed precious wisdom. The ancient follies of men who could see everything in heraldry but the common use of it by the warriors and craftsmen of their own time bred maggots of pedantry in a multitude of printed books. Heraldry became indeed that which "loads the memory without improving the understanding." The herald had come to be the undertaker's stately ally: the books about his art were books to be classed with books of dreams and fortune-telling.

It is not by way of the heraldry books that the antiquary has been tempted to its study. That generation of antiquaries has passed, whose graver minds took for common and unclean all that was not of the Roman and the Greek. Our own age finds us handling reverently all those our ancestral chattels which have escaped time and change. Had the seventeenth and eighteenth centuries been of our mind, how great might have been our inheritance of such things. Much could have been saved if the nineteenth century had been innocent of vandalism. In one room the Burlington Club has brought together a notable share of what remains to us of heraldic moveables older than the Jacobean period.

Nothing is here but what is authentically old: here are no casts, no copies nor photographs. Therefore there is little to stand for the heraldry that endures carved in stone or engraved upon monumental brass. Yet the great shield of Edward III, a boss from the old work of the Guildhall, stands for the fourteenth century; a massy fragment of a lady's effigy, the feet upon a hound whose headless neck has a collar with a hanging scocheon, calls up the memory of the rich fifteenth-century tombs. For the Tudor ages we have a stone cut with the medley of things that made up Jane Seymour's badge. This was picked out of the Hampton Court moat, where it had fallen in days when Jane Seymour's badge was but a lump of old builder's stuff. Anne Boleyn's badge, here also, was in the kitchen rubbish: doubtless it was hacked from its place when its companion was new cut. The broad plate with a knight and lady kneeling before a back-xiv

ground enriched with their badge of the flaming beacon is of the first Tudor generation: this and a few shields long astray from their stones may remind the collector of the evil time when brass went from church to the dealer in broken metals. There are brasses in Belgian churches which are not yet out of peril of plunder, which no collector may save from the Essen crucibles.

Remarkable among the hangings is the arras tapestry of English work with the strange heraldry of fifteenth-century piety, wherein one angel is armed with a shield of the Passion—the Kiss of Judas quartering the Paschal Lamb, the Hammer and Pincers, the Scourge and Reed. Another angel bears up the helm crested with the Pillar of Scourging between the Reed and the Spear. Such a crest, a cock crowing on the pillar, is shown on a page of a fifteenth-century manuscript [Harl. MS. 2169] at the end of a book of arms of the time of Henry VI, where another quartered shield of the armes of oure lorde drawe owte of the passyon has for a second quarter the arms with three alabaster boxes which in this tapestry hang from a cross, gonfanon-wise, the arms of St. Mary Magdalen.

Of greater interest to the student of armory is the cross of red velvet now applied to a blue chasuble, wrought in golden threads with English shields of arms supported by swans and set about with columbines and Stafford knots. Yet rarer antiquity is in Lord Willoughby de Broke's stole, which has no ornament but the shields which follow one another the length of it, chosen, as it would seem, out of some roll of arms which gave the embroiderer shields of blue fields to alternate with shields of red fields. Even more ancient is the other stole and its fanon, whose shields should be compared with those upon the famous Syon cope which also bears the shield of that Earl of Derby who added a border with horse-shoes to his arms of vair. One may believe that these were glorious vestments when the dyes were bright: even now the blues and greens remain true, though the reds have gone to a pale brown.

Our English armorial tiles never brought to the church floor such
delicate work as those painted tiles which, in his little chapel at Bruges, show the shields and the pulley badge of Ferry de Gros. But ours show an art as old with us as heraldry itself, and those in this exhibition carry a bold tradition of homely work through many generations of English history. The pottery of the “Cullen pots,” of the pale Siegburg ware and the brown Bellarmines, has earned its place in this room of English heraldry because the pieces shown were stamped with English shields for our market. The four ancient weights have the arms of an emperor whose authority our own kings, being, as they said, reges inuncti, would never acknowledge; yet they are weights used by Steelyard merchants sojourning in England. Over the bookbindings there need be no debate: the best of these are tooled with heraldry of Tudor princes: one has that same badge of Anne Boleyn which is seen near it in dishonoured stone. Among our plate we have a French rosewater-dish with Scottish arms upon it: a sign of the auld alliance which Highland regiments have renewed. The carven nut cup, harnessed with silver gilt, has Queen Elizabeth’s rose and an Englishman’s arms: English work all.

An enduring metal is that brazen alloy which our forefathers called latoun. Neither time nor rust will bite upon it. Of latoun are these little shields of which nigh upon three score have been brought together in one case. One may guess that each has been lost and found again in the earth where it fell. There were so many of them, and even the ploughman has learned to pick up odd bits of metal and carry them to the curiosity shops. The commonest type is the knight’s shield in little, with a loop at the upper rim. Like the shields on the church brass, these shields were enamelled upon their hatched surfaces: some of these keep traces of the old colours. The devices on them show that they were made in great plenty during the best age of that heraldry which they illustrate. As for their use, we know that they jingled on the head-stalls of horses. One of them is linked to the hound’s collar in that broken piece of a stone effigy which is shown here. Doubtless they served many uses in days
INTRODUCTION

when a man's shield or badge was a sign everywhere of his ownership.

But if you would see our medieval armory in the pride of its beauty, you must choose here between the seals and the rolls of arms. Where every freeman would have his seal, there was work for many seal-engravers, and our English artists made their art nobly English. No foreign work can pass the best of our thirteenth and fourteenth century work. So national is it that anyone familiar with such things might sort out English deeds from among foreign ones with a glance at each pendant seal. Our heraldry enriched our seals: the seals gave our heraldry a new device in those supporters which begin as flankers of the shield and helm, filling spaces which the engraver's hand could not leave empty. When the engraver lost something of his sure handling of mass and line, when the thirteenth century passed, that age of mighty arts, the increasing beauty of his heraldic devices saved the engraver's credit. Even in the decadence of the fifteenth century, when the gothic was old and growing weary of its toys, the seal-engraver can dazzle us with the grotesque vigour of his armorial figures. Original seals and ancient impressions here carry the story of the heraldic seal down to the Elizabethan's thumb-ring.

In one case two painted rolls have been unrolled as far as space will allow. The one above is that very famous document, John Rous's roll, the chronicle, the armory, the picture-roll of the Earls of Warwick under whose shadow John Rous dwelled as chaplain at Guy's Cliff. This is his second version of his work, the one prepared to please the dynasty that came in after Bosworth. There is strange heraldry here of ancient heroes, slayers of giants and dun-cows: the quarterings of the last shields stand rather for legends than for lordships. But the lords and the ladies are of delicate beauty, grace is in every limb and every fold of a falling gown. This is an old antiquary's work: mark that this man, born before Agincourt, will make shift to dress up the ancicnter knights of his roll in the chain mail which he had seen upon tombs that were old when he was young.

xvii
Below the Rous roll with its tender prettiness is another treasure from the house of the heralds, the great tournament roll in which Harry the Eighth, the Knight of the Loyal Heart, is seen breaking a white lance over the tilt with a fair blow upon the adversary's helm, while, above him, Queen Katherine raises her hands in meek wonder at the Loyal Heart's prowess. Here are gentlemen like the knaves of clubs: here are ladies like the queens of spades, gay pavilions, trumpeters blowing in a row, pages and squires and marshals. Set so close to the roll of Warwick earls this strong, coarse picture of an age coarse and strong seems as though it had been brought from another continent. There is a touch of Persian lacquer about it. Yet the two rolls are English, and but a generation apart.

All pure colour of heraldry are the rolls of arms and the old grants. The fifteenth century is well advanced before we come to the first recorded grant of arms by a herald. In this room our antiquity is Mr. Crisp's grant by "Thomas Clarencsew" to Thomas Northland, a Sussex gentleman, in the last year of Edward IV's life. A curiosity in this sort is John Hawkins's patent for his arms and for his shameful crest of the demi-moor bound with cords, together with the parchment that spoiled those arms with a clumsy "augmentation" given in memory of what the Admiral did with two hundred men "at the town called Rio de la Hacho."

Last of all we come to the rolls of arms, rolls of many skins, books of many leaves, painted with row below row of shields. Without such rolls we should grope in the dark after mediaeval bearings; even the seals can give us no colours to their charges. So early as the thirteenth century these rolls were begun. Men set themselves to gather together all the arms borne by the magnates of England, adding to them the arms of strange kings and counts. Very soon it must have been reckoned a part of the herald's business to keep these long rolls: it was somebody's work to see that the knight in the north did not choose bearings already on a southern shield. That the work was done is certain: we have very few cases where arms, in the Middle Ages, were "in debate": the long process of
INTRODUCTION

Scrope against Grosvenor shows how jealous a great man might be for his ancestral shield and at what pains and cost he would protect it. No herald was called to witness at that trial. But a word in an old poem brings herald and roll of arms together before the fourteenth century was out. Says the author of the "Plowman's Creed," wondering at the many shields in a religious house's windows, "There is no herald hath half such a roll."

Copied and re-copied down the ages were those rolls of arms. First of the collection shown here is that most venerable roll which is in the keeping of the College of Heralds. It has suffered sad things. In past time some wretch with the neat fingers of a stamp-collector cut the shields from the roll, row by row, to be pasted in a book. They have, in modern times, been carefully remounted, although the roll rests in the shape of a book. It is possible that the original order of the shields has been slightly changed. But here we have an authentic roll of arms painted in the time when the old queen—la weyle reyne—was alive in Amesbury nunnery, and when the queen—la reyne—was Eleanor of Castile. There are 195 shields in this roll. A generation later, hundreds of shields were added in another version of the same. Of this version an early Tudor copy, richly painted, is Mr. Everard Green's roll, which is shown not far away from its first ancestor. The Fitzwilliam Museum lends a roll in book form, one of many copies of a well-known roll of which no original has been found; this Fitzwilliam copy is interesting as showing the care with which a sixteenth-century painter strove to imitate the style of the early fourteenth century. Of the rolls lent by the Society of Antiquaries, one is most precious, the long roll in which each charge is painted with so swift and sure a hand that the ramping lion, all lean strength, the very symbol of the king of the beasts, might have been dashed in at five strokes of the brush.

If you would know what we have lost of our medieval treasures, look about this room and see what is lacking. There is a medieval crest over a tomb at Canterbury, but we can show never another. Here is neither crest
BRITISH HERALDIC ART

nor shield; not a coat of arms for a man's body, not a horse-trapper for his horse, not a rag of an ancient banner or pennon. The knights are dust and all their bright armorial gear with them. Only the picture of it remains.

8 MANUSCRIPT TREATISE ON ARMORY. This little volume on vellum (4 1/2 by 3 inches), written about 1440 and adorned with delicate heraldic paintings, is an early treatise by Nicholas Upton, fellow of New College, Oxford, who, after serving in the French wars, became canon of Wells, St. Paul's, and Salisbury. Upton, in after years, expanded this work into his well-known _De Studio Militari_, which was edited by Edward Bysshe, Garter, and printed in London in 1654.

The treatise, which the author says he had composed at the desire of Anne of Bohemia, the first wife of Richard II, is remarkable for his strictures on the heraldic tincture _vert_, a youthful extravagance which he afterwards retracted in _De Studio Militari_.

The copy shown here has on a fly-leaf the autograph of _John Cocke alias Portcolles_, appointed Portcullis pursuivant of arms 25 December, 1553, and afterwards Lancaster Herald.

9 ENAMELLED SHIELD, 8 by 6 inches, of the arms of Barton:

_Ermine on a saltire sable an annulet of chain or, voided of the field._

This remarkable piece of heraldic decoration has been confidently described as part of the adornment of the alabaster tomb of Henry Barton, lord mayor of London, who died in 1434, and was buried in the chapel of the Charnel at St. Paul's.

_Lent by Mr. W. H. Fenton._
10 SHIELD, 9 1/2 by 8 1/2 inches, from a monumental brass in the church of St. Martin-at-Palace in Norwich, to Jane, daughter of John Blennerhasset, and wife of Sir Philip Calthorpe, who died 1550.

The arms are checky a fesse, for Calthorpe, impaling, quarterly: 1, a chevron between three dolphins, for Blennerhasset; 2, three scutcheons, for Lowdham; 3, a lion rampant crowned, for Orton; 4, a pall reversed ermine, for Keldon.

29 MONUMENTAL BRASS to Thomas Lovell and his wife Margaret Pyckeringe; the latter died 6 July 1597, aged 61 years.

A rectangular plate, 20 by 16 inches, showing Thomas Lovell and his wife kneeling before a table on which are open books. He is in the civil dress of the period and she wears a French hood, ruff, and gown with close sleeves. Behind him are the figures of their four sons and behind her those of their five daughters. Above the table is a shield of arms, a chevron between three wolves' heads erased, for Lovell, impaling a chevron between three fleurs de lis, for Pyckeringe, and below are the words Love & Lyhe.

The inscription reads thus:

Here with in this chauncell on ye north side doth lye ye Corpessis of Thomas Lovell Esquier & Margaret Pyckeringe his wyfe who was to hym full deare, they lyved together in ye state of holy matrimo-nye, 33. yeares, 4ij dajes. 1 PANEL of oak, carved with a shield of the arms, Per saltire sable and or, in chief three trefoils and in base as many of the second, and twenty-four quarterings of Tresham, placed in a strapwork border, with the crest of Tresham, a boar's head coming out of a crown and holding a trefoil in the mouth, in the two upper corners.

Lent by the Society of Antiquaries.

2 PANEL OF TAPESTRY, representing the Holy Trinity, with the Virgin and St. Mary Magdalen kneeling; behind them two angels. The Almighty is supporting the figure of Our Lord, who is marked with the stigmata, the Holy Ghost appears as a dove above. The angel behind the Virgin holds in his right hand a tilting helm with mantling and torse, the crest formed of the emblems of the Passion; the angel behind the Magdalen has on his cloak a quarterly coat of the Passion, showing in the first quarter the kiss of Judas, in the second Agnus Dei, in the third the hammer and pincers, and in the fourth the reed and scourge; he holds the Cross from the two arms of which hangs a banner of the arms of the Magdalen, Argent three ointment pots gules. The cloaks of the angels have vairy borders.

It is possible that this panel may have been made for the priory of Austin Canons at Pentney in Norfolk, which house was dedicated in honour of the Trinity, St. Mary, and St. Mary Magdalen, and bore arms similar to those on the banner. Its date is about 1400.
This is an interesting example of sacred heraldry, and there seems but little doubt of its English origin. The faces of all the figures, especially the Magdalen, are characteristically English, and the emaciated form of Our Lord recalls a familiar type seen in the Nottingham alabaster tables of nearly the same date. Further, the best authorities on the Continent all decline to admit that it belongs to France, Germany, Flanders, or Switzerland.

3 THIRD PART OF THE MOUNTJOY ROLL. (For description, see page 4.)

CASE C

4 THE WARWICK ROLL, showing the history of the Earls of Warwick. The work of John Rous, chantry priest at Guy’s Cliffe near Warwick, who died 14 January 1490-1, and was buried in St. Mary’s church at Warwick.

The roll, on vellum, 24 feet 6 inches by 11 inches, is elaborately illustrated with delicate pen drawings of kings and queens, saints and mythical heroes, nobles, knights and ladies, together with painted shields and banners of their arms and alliances.

5 THE WESTMINSTER TOURNAMENT ROLL, illuminated in gold, silver and colours on vellum, 59 feet 6 inches by 14 2/3 inches, representing the procession to the lists, the combat, and the return to court, at the solemn jousts held by Henry VIII at Westminster,
12 and 13 February, 1509-10, in honour of Queen Katherine of Aragon, and to celebrate the birth of their only son, Henry Duke of Cornwall (born 1 January, 1509-10, died 22 February following).

This, the most superb of all known tournament rolls, begins with the words _Vive le noble Roy H. VIII_ and the crowned badge of Queen Katherine, a rose gules diminuating a pomegranate between the letters H and K, tied to the badge by green laces.

_Le Maistre de l'armurerye du Roy_, mounted and accompanied by twelve attendants, leads the procession. He is followed by the Sergeant-at-arms, also mounted and carrying a mace. Next come _Les Trompettes_, six in number, all mounted and blowing on trumpets, from which hang banners of the king's arms fringed with green and white, the Tudor livery colours.

Eight mounted officers, wearing heavy gold chains and named _Les gorgyas de la Court_, next appear, preceding _Les officiers d'armes_ (four heralds and two pursuivants), who usher in the four "tenants" or challengers. These, named _joyeux Penser_ (Sir Edward Nevill), _Bon Vouloir_ (William Earl of Devon), _Vaillant Desir_ (Sir Thomas Knyvet) and _Noble Cœur Loyal_ (the King), are mounted and in their jousting armour of plate, the three knights riding under tents striped red and blue and powdered with golden Ks, while the king's tent is of gold and red brocade with blue stripes. These tents are borne over the riders by thirty-eight attendants, carrying green and white rods. Two horses, with gilded harness and tilting saddles covered with gold brocade, and with the inscription _Les selles d'armes_ above, are led behind the four defenders.

_Le Pages du Roy_ come next. They are nine in number, and mounted on horses trapped with gay colours powdered with Tudor roses, portcullises, fleurs de lis, red roses, and rayed pomegranates, the last horse being trapped with the arms of the king. A black horse in trappers of gold brocade and ermine, labelled _La selle Dhonne',_ led by a page and followed by _Le grant Escuyer_ and _Le maistre des pages_, brings this part of the procession to a close.

Without a break is next displayed the scene of the jousting—the part of the Roll here shown. Three of _Les Quatre Tenants_ are seen mounted and armed for their courses before their open tents. The king, whose gorgeous tent is closed, is running a course with a knight
on whose helm he has just broken a lance. Beyond the barrier dividing
the tilt-yard is the queen’s pavilion, hung with blue and decorated
with stars and royal badges, in which sits Katherine, surrounded by
ladies and courtiers. On the opposite side are Les Venantz, the eight
answerers armed and mounted, who, in compliment to Queen Katherine,
appeared with the cockle-shells of St. James, the castles of Castile,
the roses of Aragon and the pomegranates of Granada on their horse-
trappers. Behind them are the six mounted trumpeters blowing Le son
des Trompettes—A l’hostel, the signal to return to court.

Lyssue du Champ, which follows, shows the order of the return.
Sixteen mounted gentlemen precede a magnificently attired official,
also mounted and bearing Le heaulme du Roy. Then Le Roy desarmey,
Henry VIII dressed in cloth of gold and carrying his broken lance,
rides alone followed by eighteen attendants; and the splendid pageant
closes with another view of Queen Katherine and the courtiers seated
in the royal pavilion.

6 HONOR MILITARY AND CIVIL, CONTAINED IN FOURE
BOOKS, by William Segar, Norroy King of Arms, printed in London
by Robert Barker, 1602.

The second book is entitled, “Knighthood in generall, and Par-
ticular,” the ninth chapter thereof describing the knights of the
Garter. The illustration to this chapter is the portrait of Charles
Howard, Earl of Nottingham, wearing the robes, etc., of the order,
and opposite is inserted the first state of the plate, before the inscrip-
tion in the lower right-hand corner was added.

7 COMPENDIOSA TOTIUS ANATOMIE DELINEATIO. Lon-
don, 1545.

The engraved title-page, which contains the arms and badges of
Henry VIII, is the earliest example of an English title-page produced
in this manner. In the 1569 edition a portrait of Queen Elizabeth
replaces the royal arms that appear in this copy.

8 THE FUNERAL ROLL OF SIR PHILIP SIDNEY, who died 17 October 1586 at Arnhem in Flanders, and was buried at St. Paul's, 16 February 1586-7.

The roll, 44 feet by $8\frac{3}{4}$ inches, was drawn and invented by Thomas Lant, servant to Sir Philip Sidney, and afterwards Windsor herald, engraved on copper plates by Theodore de Brij, and printed on paper in 1587. The part here shown of the funeral procession, which was attended by 700 mourners, displays the hearse and standard and the banners of the knight's descents.

10 DE ORIGINE MORIBUS ET REBUS GESTIS SCOTORUM, by John Leslie, bishop of Ross, published at Rome, 1578.

Contains portraits of Scottish kings, Henry VII of England, Mary, Queen of Scots, and Prince James, with genealogical trees, arms, etc., also the first engraved map of Scotland.

The portrait of Queen Mary, according to Mr. Lionel Cust, was probably engraved by an Italian artist from a miniature, and is considered to be an authentic portrait.

John Leslie, bishop of Ross, was one of Queen Mary's most trusted friends and councillors, and wrote this book while representing her interests at the Papal court.

"THE PASTYME OF PEOPLE | The Cronycles of dywers realmys and most specyally of the realme of | Englund breuely cópylyd & emprynted in chepesyde at the sygne of | the mearemayd next to pollys gate."

At the end is the device of John Rastell.

The book is not dated, but a sentence in the text makes it clear that it was printed in the "xxi yere of kynge Henry VIII," or 1529.

It contains the first woodcut portraits of English sovereigns, from William the Conqueror to Richard III inclusive. In one of the upper corners of each portrait the king's arms appear, and in the case of William the Conqueror, five weapons, viz.: two arrows, a dart, a spear, and a battle-axe, are shown.

36 PORTION OF A MONUMENTAL EFFIGY, showing a dog at the feet of a lady.  
Hanging from the dog’s collar is a small armorial pendant of the arms of Scales, _six escallops_, impaling Ufford, _a cross engrailed._  
This fragment was found in an old wall near Blackborough in 28
Norfolk, and is no doubt part of a monument, formerly in the priory church there, to Robert, Lord Scales (died 1369) and Katherine his wife, sister and co-heir of Earl William, and daughter of Robert de Ufford, 1st Earl of Suffolk. It is of interest as showing one use of the little armorial pendants of which so many are shown in Case E.

Many of these coats of arms will be readily recognized; but some of the colours have faded with age, and it is not possible to determine the ownership of every shield. But the careful way in which the shields are arranged to give a pleasant variety of colour is noteworthy; and it seems possible that it was that mainly which determined the choice.

11 EMBROIDERED HANGING, 2 feet 5 inches by 5 feet 2 inches. Probably part of the hangings of a state bed, in three strips of equal width.

The middle strip is of crimson satin with a woven pattern of silver. In the middle a shield of arms is embroidered, surrounded by a wreath between the letters H and E. W. The two side strips are of white satin embroidered in yellow silk with an arabesque pattern.

The shield of arms is _Quarterly_: 1, Wentworth; 2, Le Despenser; 3, _Azure two bars dancetty or and a chief argent_, for Stonor; 4, _Argent a fesse indented of three points_, for Montagu; _impaling_, _Quarterly_: 1, Glenham; 2, Bacon; 3, Brandon; 4, _Sable a fesse between two chevrons or_, for Baynard.

A comparison of this hanging with that shown on the West wall reveals the essential facts of the genealogy of the Wentworths of Nettlestead. The shield in the larger hanging displays the descent of the owner from Roger Wentworth, who married Margery, daughter and heir of Sir Philip Le Despenser of Nettlestead, by Elizabeth, daughter and heir of Robert, Lord Tiptoft, and inheritor of his Nettlestead estates, Sir Philip Le Despenser's grandmother being Margaret, daughter and heir of Ralph Goushill.

The heraldry of the smaller hanging tells the tale of Henry Wentworth's descent through his grandmother Anne, daughter and heir of Sir William Stonor, from Anne Nevill, daughter and co-heir of John, Marquess of Montagu, who descended from Alice, daughter and heir of Thomas, the last Earl of Salisbury of the house of Montagu.

37 ARMORIAL MANUSCRIPT, on vellum, 15\(\frac{3}{4}\) by 11\(\frac{1}{4}\) inches, containing the Lumley pedigree made by Robert Cooke, Clarencieux, in 1592, bound up with rough notes concerning the same, and an illustrated inventory, made for John Lord Lumley "of all his monuments of marbles, pictures and household stuff, in 1590."

The magnificently written pedigree, illuminated in gold, silver, and colours on eighteen pages of the book, begins with an abstract of the pedigree illustrated with eighteen emblazoned shields of the arms of the
Lumleys who were heads of the house, impaling those of their wives. Next follows the ancient shield of Lumley, *Gules six popinjays argent*, with helm and crest of *a pelican in her piety*. Then comes a family tree on ten pages beginning with "*Liulphus nobilis minister regis Wilelmi primi*," and showing its branches down to John, 7th Lord Lumley, illustrated with forty-six shields.

The family descent is next illustrated by a pedigree, on two pages, which begins with the name *Deus*, followed by those of Adam, Seth, Enos and other antediluvian worthies to Noah and "Sem," and continues with twenty-nine others to Ina, king of the West Saxons. Then after six more the line of English kings begins with Egbert, and is continued by Alfred, Edward the elder, Edmund, Edgar, Ethelred, Edmund Ironside, and Edward the Confessor, with the arms attributed to them. The line continues through Margaret of Scotland, the Empress Maud, and the early kings and princes of the house of Anjou to Henry, 2nd Earl of Lancaster, whose line is traced for six generations through Percy and Nevill of Raby to George, 4th Lord Lumley. Parallel with this are shown the descent of George's wife, Katherine Thornton, from Henry of Lancaster, and those of his daughter-in-law Anne Conyers, and of Joan Scrope the wife of John, 6th Lord Lumley, from John of Gaunt.

The next four pages show the family tree from Liulph, bearing arms *Gules six popinjays argent*, through Marmaduke de Lumley, who was son of Robert de Lumley by Lucy, co-heir of the Thwengs, and assumed their arms. Marmaduke's son Ralph married a Nevill, and was created Lord Lumley in 1384, and the pedigree is carried down through his descendants, lords of Lumley, to John the 7th lord, who was twice married and died without issue in 1609.

This family tree, illustrated by ninety-five shields of arms of the Lumleys and the families with whom they were allied, ends with a coat of eight quarters: Lumley, Lumley ancient, D'Audre, Morwic, Bruce, Lancaster, Thornton, and Wanton, as blazoned for John, 7th Lord Lumley.

Lent by Mr. F. A. Crisp, F.S.A.

42 MATRIX of gilded bronze, vesica shaped, 2 5/16 by 2 inches, originally
belonging to an English bishop of about 1465, and altered to
become the seal of the collegiate church of Tamworth in Stafford-
shire.

The device shows a bishop, between an archbishop and St.
Katherine, all under architectural canopies, with a niche above the
central canopy containing a half-length figure of the Virgin with the
Child. Below is another niche in which is a bishop in prayer, between
two shields, both showing evident signs of re-engraving. The dexter
shield, now charged with the initials T.P., originally bore the royal
arms, parts of two of the fleurs de lis of France being plainly visible.
The sinister shield, which also shows traces of earlier engraving, is
charged with arms, on a fesse between three pheons a hart's head
caboshed between two roundels, which arms are those of Thomas Parker,
dean of Tamworth, 1525 to 1538.

The legend, in coarsely punched letters, replacing the original
inscription, is: s' comvne collegiate de toworth.

3 FIRST GREAT SEAL OF HENRY IV attached to a confirmation, dated 15 October 1399, of earlier charters disafforesting lands in Spalding and Pinchbeck.

This seal was made from the matrix of the eighth and last great seal of Edward III, which was adapted for Richard II, and again for Henry IV by the successive substitution of the names of those kings for the original EDWARDVS. It remained in use until Henry IV caused his second great seal to be made in 1406.

The obverse shows the king, crowned and holding sceptre and orb, on a canopied throne between two sitting lions. Above the lions, in two small niches, are, on the right the Virgin and Child, and on the left St. George; flanked by two trees under canopied niches from which hang shields of the royal arms, France Ancient and England.
At the foot of each tree is a greyhound; and beyond these are two smaller niches, each containing a man-at-arms.

On the reverse the king is seen mounted and armed in mail, with his arms on his shield, surcoat, and horse-trappers, and his helm crested with the lion of England.

The legend on both sides is: HENRICVS DEI GRACIA REX ANGLIE DNS HIBERNIE ET AQUITANIE
